## **...inside is more than skin deep**

Shaping the perfect surface demands a filler that is suited for each specific job.

This means that a smooth and easy-worked ready-mixed filler with a high filling capacity is needed.

By using this, the best possible results for a following paint job are achieved.

**Ask us -we know!**

# Scanspac inside

Ready-mixed filler is the real product manufactured and supplied by Scanspac.

A high and even product quality is the result of more than fifty years development and investing in modern technical equipments, processes and systems. Today Scanspac deliver 2/3 of all ready-mixed filler in the Nordic countries.

To achieve premium quality from raw material to finished product in stock, full control of the production process is needed. Our operators are controlling the viscosity as well as the dry content each batch. A further visual judgement in order to check that the ready mixed filler fulfils our supreme quality demands is done. All tested samples are stored until expiry date.

Scanspac is the leader of new products and working methods. Our ambition is to produce even smoother fillers with minimum environmental influence and a wider range of use. We are continuously improving ergonomics and efficiency by finding new application methods and equipments easier to work with.

All this to guarantee contented clients.
